

## **IBM posts SPECpower\_ssj2008 score for x3250 M2**

*x3250 M2 delivers excellent overall ssj\_ops/watt score for a single-socket server*

May 21, 2008 ... IBM® System x™ 3250 M2 servers are a part of the System x rack-optimized server line. These single-socket servers deliver Intel® Xeon® quad-core power and excellent server function.

The IBM System x3250 M2 is a 1 U, single-socket server with power consumption, noise reduction, and space optimizations that make it perfect for any business looking for a reliable, compact workgroup or departmental server that consumes low power, can be dedicated to a single application, and is priced right now and for the future.

In recent measurements made with the new SPECpower\_ssj2008™ benchmark, the x3250 M2 server achieved a Performance to Power Ratio of 913 overall ssj\_ops/watt.

This score demonstrates excellent performance per watt for a single-socket server. For example, the x3250 M2's score is more than 14 percent higher than the score of 800 overall ssj\_ops/watt achieved by the Dell PowerEdge R300 with the Quad-Core Intel Xeon Processor L5410 (2.33GHz, 12MB L2 cache, and 1333 MHz front-side bus—4 cores/1 chip/4 cores per chip). (1)

The x3250 M2 was configured with the Quad-Core Intel Xeon Processor X3350 (2.66GHz, 12MB L2 cache, and 1333 MHz front-side bus—4 cores/1 chip/4 cores per chip) and 4GB of DDR2 PC2-5300 FBD memory and ran IBM Java™ 6 Runtime Environment and Microsoft® Windows® Server 2003 R2 Enterprise x64 Edition SP1.
