

## IBM posts SPEC CPU2006 scores for quad-core x3400 M2

*x3400 M2 achieves competitive scores for a 2-socket Intel processor-based system*

May 19, 2009 ... The IBM System x® 3400 M2 servers are self-contained, high-performance, tower (or optional rack-mounted) systems designed for Web and business server applications in remote or distributed environments. These 2-processor, 5U servers are highly scalable in configuration, performance, and availability. They meet the requirements of server applications in the small-to-mainstream businesses that need an affordable general-purpose network server.

In recent measurements, the x3400 M2 delivered competitive scores on the SPEC® CPU2006 benchmark suite. The x3400 M2 was configured with two Quad-Core Intel Xeon E5540 processors (2.53GHz, 8MB L3 cache per processor—2 processors/8 cores/16 threads), 24GB of DDR3 PC3-10600R memory, and SUSE Linux® Enterprise Server 10 x64 SP2.
