

Lenovo ThinkAgile VX 2U4N Certified Node (Xeon SP Gen 1)

Product Guide (withdrawn product)

Lenovo ThinkAgile VX Certified Nodes are designed for deploying industry-leading Hyper-Converged Infrastructure (HCI) software from VMware on Lenovo enterprise platforms that feature the first generation of the Intel Xeon Processor Scalable family (Xeon SP Gen 1). They deliver fully validated and integrated Lenovo hardware and firmware that is certified with VMware software and preloaded with the VMware ESXi hypervisor. VMware offers a unique, software-defined approach to hyper convergence, leveraging the hypervisor to deliver compute, storage and management in a tightly integrated software stack.

The ThinkAgile VX 2U4N Certified Nodes are dense nodes in the 2U 4-node rack-mount enclosures that can be optimized for various types of workloads, including general purpose workloads for small and medium businesses, compute-heavy workloads (such as virtual desktop infrastructure (VDI), server virtualization, private/hybrid clouds, enterprise applications, and light databases), and high-performance workloads (such as databases, e-mail and collaboration, and load-balancing clusters).

The ThinkAgile 2U4N Certified Nodes are shown in the following figure.

The VMware software running on ThinkAgile VX Certified Nodes delivers the following key features:

- Distributed architecture that allows "pay-as-you-grow", non-disruptive scaling by adding new nodes to the cluster (scale-out) to increase capacity and performance.
- Advanced capacity management, including deduplication, compression, and erasure coding (RAID 5/6), which helps deliver greater storage utilization with dramatically lower storage capacity and costs.
- Automation of VM storage provisioning and control of storage service levels (capacity, performance, availability) with VM-centric policies to load balance storage resources.
- Native HCI security solution with two-factor authentication (SecurID and CAC) and data-at-rest encryption that does not require self-encrypting drives (SEDs).
- Stretched cluster with local and site failure protection between two geographically dispersed sites for higher level of availability with near zero downtime.
- Centralized management with provisioning, administering, and monitoring virtual resources across multiple hosts and clusters from a centralized interface.
- Rapid workload provisioning, simplified data center operations, increased business efficiency, and decreased CAPEX and OPEX costs.
- VM and data protection with agent-less, image-level virtual machine backups and application-aware protection for business-critical Microsoft applications (Exchange, SQL Server, SharePoint) along with WAN-efficient, encrypted backup data replication.
- Reduced unplanned downtime and virtually eliminated planned downtime for server and storage maintenance with live workload migration, high availability, and fault tolerance.
- Enhanced application performance and availability with resource management, load balancing, and access prioritization.
- Intelligent operations management and automation to proactively monitor and manage compute, storage, and networking resources, identify performance bottlenecks, and re-balance workloads by leveraging predictive analytics.
- Capacity planning and optimization guidance to address future needs with performance trends, projections and extended forecasts.
- Managing remote offices and branch offices with rapid provisioning of servers through virtualization, minimization of host configuration drift, and enhanced visibility into regulatory compliance, across multiple sites.

Memory

The ThinkAgile VX Certified Nodes support Lenovo TruDDR4 memory. TruDDR4 memory uses the highest-quality components sourced from Tier 1 DRAM suppliers and only memory that meets strict requirements is selected. It is compatibility tested and tuned to maximize performance and reliability.

The VX 2U4N Certified Nodes supports up to 16 DIMMs. The following rules apply when selecting the memory configuration:

- The certified node supports RDIMMs, LRDIMMs, or 3DS RDIMMs.
- Mixing different types of memory (RDIMMs, LRDIMMs, and 3DS RDIMMs) is not supported.
- Mixing x4 and x8 RDIMMs and RDIMMs of different capacity is supported.
- All DIMMs in the certified node operate at the same speed up to 2666 MHz, which is determined by the maximum memory speed supported by the specific processor.
Note: Maximum memory speed can be achieved when Max performance mode is enabled in UEFI.
- The following maximum memory capacities supported by the certified node:
 - RDIMMs: 512 GB (256 GB per processor).
 - LRDIMMs: 1 TB (512 GB per processor).
 - 3DS RDIMMs: 1.5 TB (768 GB per processor).

The following memory protection technologies are supported:

- ECC
- SDDC (for x4-based memory DIMMs)
- ADDDC (for x4-based memory DIMMs; Gold and Platinum processors only)
- Patrol scrubbing
- Demand scrubbing

Single Device Data Correction (SDDC) works only in the independent channel mode (the default operational mode) and supports only x4-based memory DIMMs.

Adaptive Double Device Data Correction (ADDDC) works with x4-based memory DIMMs and requires two DIMM ranks per channel, Intel Xeon Gold or Platinum processors, and the Closed Page memory access mode.

The following table lists the memory options that are available for selection.

Internal storage

The ThinkAgile VX 2U4N Certified Node supports the following internal drive bay configurations to provide storage capacity:

1. 6 SFF hot-swap drive bays:
 - a. 6x 2.5" SAS/SATA
 - b. 4x 2.5" SAS/SATA & 2x 2.5" AnyBay
2. 4 SFF hot-swap drive bays:
 - a. 4x 2.5" SAS/SATA
 - b. 4x 2.5" U.2 NVMe PCIe

In addition, the VX 2U4N Certified Nodes support two internal M.2 SATA SSDs for the hypervisor boot volume.

Lenovo AnyBay allows a choice of drive interface types in the same drive bay: SAS drives, SATA drives, or U.2 NVMe PCIe drives.

The following figures show the internal drive bay configurations.

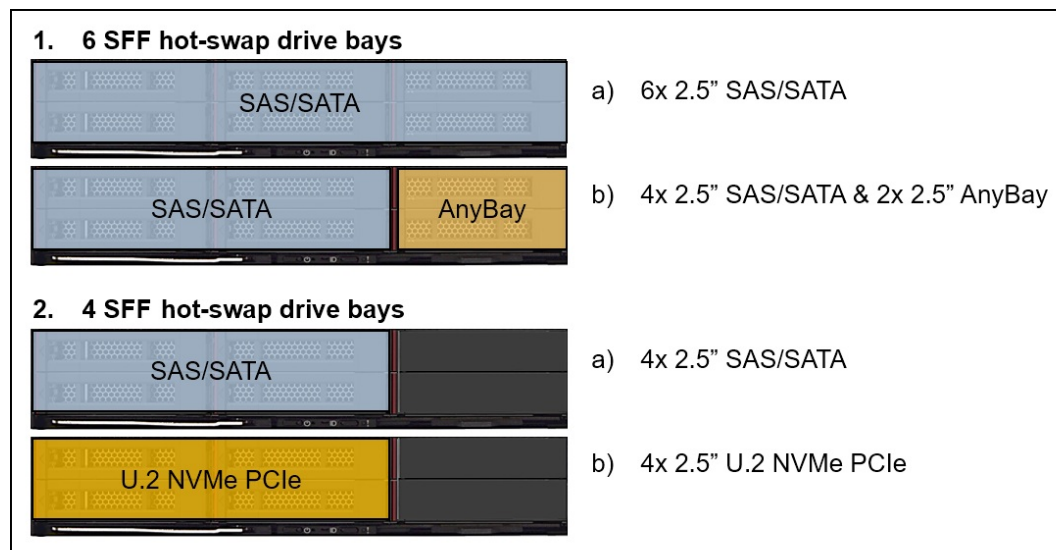

Figure 4. Internal drive bay configurations

The following table lists the internal storage options for the VX 2U4N Certified Node.

Configuration notes:

- NVMe PCIe SSDs are supported in the AnyBay or NVMe-only drive bays and require the second processor to be installed.
- 6-drive backplanes are supported only in the configurations with the following processors (the processors not listed below support only 4-drive backplanes)::
 - Intel Xeon Bronze 3104 6C 85W 1.7GHz
 - Intel Xeon Bronze 3106 8C 85W 1.7GHz
 - Intel Xeon Silver 4108 8C 85W 1.8GHz

 - Intel Xeon Gold 6152 22C 140W 2.1GHz
 - Intel Xeon Platinum 8153 16C 125W 2.0GHz
- In the configurations with 6-drive backplanes, the optional VGA/USB KVM Breakout Module occupies the upper-left drive bay, limiting the maximum number of drives to 5.
- The M.2 with Mirroring Enablement Kit (7Y37A01093) is connected to the Intel PCH via the PCIe link, and the kit supports two M.2 SATA SSDs configured in a RAID-1 drive group for a hypervisor boot volume.

The following table lists M.2 drive selection options for the hypervisor boot volume.

* For hybrid storage configurations only; not available as a cache drive in all flash storage configurations.

[^] For all flash storage configurations only; not available as a cache drive in hybrid storage configurations.

Configuration notes:

- The drives can be selected either from the Cache drives and Capacity drives categories if the hybrid or all flash storage configuration is selected, or from an uncategorized list if no storage configuration type is selected.
- If the drives are selected from the Cache drives and Capacity drives categories, the following rules apply:
 - 1 drive group: 1 cache drive and from 2 to 5 capacity drives.
 - 2 drive groups: 1 cache drive and 2 capacity drives in each drive group.
 - The quantity of the capacity drives in each drive group must be the same.
 - All cache drives in the certified node must be of the same model and capacity. All capacity drives in the certified node must be of the same model and capacity.

Network connectivity

The ThinkAgile VX 2U4N Certified Nodes provide two-port 1/10 GbE RJ-45 or 10 GbE SFP+ network connectivity with the onboard Intel X722 NIC in the certified node and an Ethernet I/O Module (EIOM) installed in the VX Enclosure. Additional 1/10 GbE RJ-45, 10 GbE SFP+, 25 GbE SFP28, 40 GbE QSFP+, or 100 GbE QSFP28 ports can be selected, if required.

The following table lists the network adapter options that are available for selection.

PCIe slots in the VX Enclosure.

* The adapter comes without transceivers or cables; for ordering transceivers or cables, see the configuration notes below the table.

^ The 25 GbE connectivity requires the optional Mellanox QSA 100G to 25G Cable Adapter (4G17A10853) (one per port); the supported cables include 25 GbE passive DAC and active optical cables (25 GbE transceivers not supported) (see [Transceivers and cables for 25 GbE SFP28 adapters](#) for details).

† The adapter is supported in the PCIe x16 slots supplied by the PCIe x16 I/O Shuttle.

Configuration notes:

- PCIe x8 Low Profile network adapters are supported in the low-profile PCIe x8 and x16 slots supplied by the 8-slot PCIe x8 or 4-slot PCIe x16 I/O shuttles.
- PCIe x16 Low Profile network adapters are supported in the low-profile PCIe x16 slots supplied by the 4-slot PCIe x16 I/O shuttle.
- Supported transceivers or DAC cables should be purchased for the SFP+, SFP28, QSFP+, and QSFP28 adapters, and UTP Category 6 cables should be purchased for the 10 GbE (Category 6) RJ-45 adapters. The maximum number of transceivers or cables that are supported per adapter equals the quantity of the adapter ports, and all adapter ports must have the same type of the transceiver or cable selected.

The following transceiver and cables can be purchased:

- o [UTP cables for 10 GbE RJ-45 adapters](#)
- o [Transceivers and cables for 10 GbE SFP+ adapters](#)
- o [Transceivers and cables for 25 GbE SFP28 adapters](#)

Configuration notes:

- Two power supplies per system.
- For N+N power redundancy, the power supplies should provide sufficient power without oversubscription for the selected node configuration. To ensure that the right power supply is chosen, you should always validate your node configuration using the latest version of the Lenovo Capacity Planner: <http://datacentersupport.lenovo.com/us/en/solutions/Invo-lcp>
- The power supplies support AC (Worldwide) and HVDC (China only) power sources.

The VX 2U4N Certified Enclosures ship with two customer-configured power cords. The following table lists the rack power cables and line cords that can be ordered for the VX 2U4N Certified Enclosures.

The following Lenovo support services are available for selection:

- **Warranty service level upgrades (Preconfigured Support)** are available to meet the on-site response time targets that match the criticality of customer's systems:
 - 3, 4, or 5 years of service coverage.
 - 1-year or 2-year post-warranty extensions.
 - **Foundation Service:** 9x5 service coverage with next business day onsite response, with optional YourDrive YourData.
 - **Essential Service:** 24x7 service coverage with 4-hour onsite response or 24-hour committed repair (available only in select regions), bundled with YourDrive YourData.
 - **Advanced Service:** 24x7 service coverage with 2-hour onsite response or 6-hour committed repair (available only in select regions), bundled with YourDrive YourData.
- **Managed Services**
Lenovo Managed Services provide continuous 24x7 remote monitoring (plus 24x7 call center availability) and proactive management of a customer's data center using state of the art tools, systems, and practices by a team of highly skilled and experienced Lenovo services professionals.

Quarterly reviews check error logs, verify firmware and operating system device driver levels, and software as needed. Lenovo will also maintain records of latest patches, critical updates, and firmware levels, to ensure customer's systems are providing business value through optimized performance.

- **Technical Account Management (TAM)**

A Lenovo Technical Account Manager helps customers optimize operations of their data centers based on a deep understanding of customer's business. Customers gain direct access to a Lenovo TAM, who serves as their single point of contact to expedite service requests, provide status updates, and furnish reports to track incidents over time. Also, a TAM helps proactively make service recommendations and manage service relationship with Lenovo to make certain that customer's needs are met.

- **Enterprise Software Support**

Lenovo Enterprise Software Support is an additional support service that provides customers with software support on Microsoft, Red Hat, SUSE, and VMWare applications and systems. Around the clock availability for critical problems plus unlimited calls and incidents helps customers address challenges fast, without incremental costs. Support staff can answer troubleshooting and diagnostic questions, address product compatibility and interoperability issues, isolate causes of problems, report defects to software vendors, and more.

- **YourDrive YourData**

Lenovo's YourDrive YourData service is a multi-drive retention offering that ensures that customer's data is always under their control, regardless of the number of drives that are installed in their Lenovo server. In the unlikely event of a drive failure, customers retain possession of their drive while Lenovo replaces the failed drive part. Customer's data stays safely on customer premises, in their hands. The YourDrive YourData service can be purchased in convenient bundles with Foundation, Essential, or Advanced services.

- **Health Check**

Having a trusted partner who can perform regular and detailed health checks is central to maintaining efficiency and ensuring that customer systems and business are always running at their best. Health Check supports Lenovo-branded server, storage, and networking devices, as well as select Lenovo-supported products from other vendors that are sold by Lenovo or a Lenovo-Authorized Reseller.

Some regions might have different warranty terms and conditions than the standard warranty. This is due to local business practices or laws in the specific region. Local service teams can assist in explaining region-specific terms when needed. Examples of region-specific warranty terms are second or longer business day parts delivery or parts-only base warranty.

If warranty terms and conditions include onsite labor for repair or replacement of parts, Lenovo will dispatch a service technician to the customer site to perform the replacement. Onsite labor under base warranty is limited to labor for replacement of parts that have been determined to be field-replaceable units (FRUs). Parts that are determined to be customer-replaceable units (CRUs) do not include onsite labor under base warranty.

If warranty terms include parts-only base warranty, Lenovo is responsible for delivering only replacement parts that are under base warranty (including FRUs) that will be sent to a requested location for self-service. Parts-only service does not include a service technician being dispatched onsite. Parts must be changed at customer's own cost and labor and defective parts must be returned following the instructions supplied with the spare parts.

Lenovo support services are region-specific. Not all support services are available in every region. For information about Lenovo support services that are available in a specific region, refer to the following resources:
