Emulex 10Gb Virtual Fabric Adapter for IBM System x (Withdrawn)
Product Guide (withdrawn product)

The Emulex 10Gb Virtual Fabric Adapter for IBM System x is a member of IBM's comprehensive networking portfolio of 1 Gb and 10 Gb Ethernet adapters and delivers industry-leading performance and scalability per watt, reducing requirements for power and cooling. Protocol offloads enable the efficient use of computing resources and the support of more virtual machines per CPU, and reduce the number of servers required to support data center demands. Furthermore, the capability to use fiber-optic or twin-ax copper cabling allows you to deploy the fabric of your choice.

Did you know?

The Emulex 10Gb Virtual Fabric Adaper for IBM System x is based on the Emulex OneConnect Universal Converged Network Adapter (UCNA) platform and will include support for Fibre Channel over Ethernet (FCoE) as a future feature entitlement upgrade.

By using a common infrastructure for Ethernet and SANs, you can reduce capital expense for adapters, switches, and cables; and operational expense for power, cooling, and IT administration.
