^ Processor detail: Processor quantity and model, cores, core speed, L3 cache, memory speed, TDP.

\*With one processor, only two standard PCIe slots (Slots 4 and 9) can be used (Slot 5 requires the second processor). If a RAID controller is present, it occupies one of the standard PCIe slots (Slot 9).

§ For these models, the standard DIMM is the 8 GB 1Rx4 RDIMM (46W0788).

† The maximum number of drive bays include 8x 3.5" front bays and 4x 2.5" HS rear bays.

The x3650 M5 Express and TopSeller models listed in this section include the following items:

- System x Enterprise Slides Kit
- 2.8 m C13-C14 power cord (one for models with one power supply and two for models with two power supplies)
- Documentation Package

**Note:** Cable Management Arm (CMA) is not included. See [Rack installation](#) for ordering information.

## Processors

The System x3650 M5 supports up to two processors, and the processor options listed in the following table. This table shows which server models have each processor as standard. If no corresponding "where used" model exists for a particular processor, this processor is available only through CTO. Second processor options include two extra cooling fans.

## Memory

The System x3650 M5 supports TruDDR4 memory. TruDDR Memory uses the highest quality components sourced from Tier 1 DRAM suppliers and only memory that meets our strict requirements is selected. It is compatibility tested and tuned on every System x server to maximize performance and reliability. TruDDR4 Memory has a unique signature programmed into the DIMM that enables System x servers to verify whether the memory installed is qualified or supported. Because TruDDR4 Memory is authenticated, certain extended memory performance features can be enabled to extend performance over industry standards. From a service and support standpoint, System x memory automatically assumes the system's warranty, and service and support provided worldwide.

The server supports up to 12 DIMMs when one processor is installed and up to 24 DIMMs when two processors are installed. Each processor has four memory channels; there are three DIMMs per channel.

The following rules apply when selecting the memory configuration:

- The server supports RDIMMs and LRDIMMs.
- Mixing types of memory (RDIMMs and LRDIMMs) is not supported.
- All DIMMs in the server operate at the same speed, which is determined as the lowest value of:
  - Memory speed that is supported by the specific processor.
  - Lowest of maximum operating speeds for selected memory configuration that depends on quantity of DIMMs per channel, as shown under "Maximum operating speed" in Table 5.

The following memory protection technologies are supported:

- ECC
- Chipkill (for x4-based memory DIMMs)

Chipkill works only in independent channel mode (the default is operational mode) and supports only x4-based memory DIMMs.

The following table shows the characteristics of the supported DIMMs. Tables cells highlighted with a gray background indicate when the number of DIMMs per channel still allows the DIMMs to operate at a rated speed.

\* In the Storage controller column, RAID or HBA means that any combination of the M1215, M5210, and N2215 storage controllers is supported up to a maximum quantity listed; the numbers in brackets (x+y+z) specify the number of drives connected to each of the storage controllers.

# Each PCIe SSD Extender Adapter (PN 00ML997) provides connectivity for up to two PCIe SSDs, and each adapter occupies a PCIe slot. For factory configured models, two PCIe SSD Extender Adapters (FC AS95) must be included in the configuration. For field upgrades, the PCIe SSD Upgrade Kit (PN 00FK677) includes two PCIe SSD Extenders.

\*\* Requires a storage configuration with 8x or 16x 2.5-inch SAS/SATA hot-swap drive bays (one of the first three storage configurations listed in Table 8). For 16x 2.5-inch hot-swap drive bay configurations, the internal optical drive is not supported.

\*\*\* Two drives in the 2x 3.5-inch Rear HDD Kit are connected to the SAS expander on the 12-drive backplane, that is, to the same storage controller as 12 drives on the front.

## Configuration notes:

- 24x 2.5-inch drives are supported on storage dense models only (models without the System x3650 M5 2.5" ODD/LCD Light Path Bay, FC A5FY; the first configuration in Figure 5).
- 4x 2.5-inch rear drives are supported on 2.5-inch hot-swap drive bay models and 3.5-inch hot-swap and Simple Swap drive bay models.

The following configuration rules apply to 3.5-inch drive bays models:

- If no 3.5-inch Rear HDD Kits are installed, up to two 2.5-inch Rear HDD Kits can be installed.
- If the 3.5-inch Rear HDD Kit (Cascaded RAID) is installed, up to one 2.5-inch Rear HDD Kit can be installed.
- If the 2x 3.5-inch Rear HDD Kit (Independent RAID) is installed, the 2.5-inch Rear HDD Kits cannot be installed.
- If the PCIe Riser 1 is installed, the 2.5-inch Rear HDD Kit is installed in place of the Riser 2. If the PCIe Riser 2 is installed, the 2.5-inch Rear HDD Kit is installed in place of the Riser 1.
- If the 2.5-inch Rear HDD Kit is installed in place of the Riser 2, the operating temperature is limited to ASHRAE A2.
- 2x 3.5-inch rear drives are supported on 3.5-inch hot-swap drive bay models only.
  - With 8x 3.5-inch HS drive bay models, the 2x 3.5-inch Rear HDD Kit is connected to a dedicated M1215 controller, and the 2x 2.5-inch Rear HDD Kit cannot be installed.
  - With 12x 3.5-inch HS drive bay models, the 2x 3.5-inch Rear HDD Kit can be connected to a dedicated M1215 controller or SAS expander on the 12-drive backplane. If the 2x 3.5-inch Rear HDD Kit is connected to a dedicated M1215 controller, the 2x 2.5-inch Rear HDD Kit cannot be installed. If the 2x 3.5-inch Rear HDD Kit is connected to a SAS expander, the 2x 2.5-inch Rear HDD Kit can be installed.
- 3.5-inch Rear HDD Kit is not supported on Simple Swap models.
- NVMe PCIe SSDs are supported on 8x or 16x 2.5-inch SAS/SATA hot-swap drive bay models only.
  - For 16x 2.5-inch SAS/SATA hot-swap drive bay configurations, the internal optical drive is not supported in the configurations with NVMe PCIe SSDs.
  - If the NVMe PCIe SSD Upgrade Kit is used in the configurations with one processor, the 2.5-inch Rear HDD Kit is not supported.
  - If the NVMe PCIe SSD Upgrade Kit is used in the configurations with two processors, up to one 2.5-inch Rear HDD Kit is supported.
  - The NVMe PCIe SSD Upgrade Kit is not supported in the configurations with two 2.5-inch Rear HDD Kits.

## Controllers for internal storage

The following table lists the storage controllers and additional options used for internal disk storage of the System x3650 M5 server. The internal storage controllers are supported in the PCIe slots in the following order: Slot 9 (dedicated slot), Slot 4, Slot 1, and Slot 6 (Slot 6 requires the second processor).

## I/O expansion

The System x3650 M5 server supports up to nine PCIe slots: one slot on the system planar that is dedicated for an internal storage controller, two regular PCIe slots on the system planar, and up to six PCIe slots with different riser cards installed into two riser sockets on the system planar (one riser socket supports installation of one riser card). The slot form factors are as follows:

- Slot 1: PCIe 3.0 x16 or PCIe 3.0 x8; full-height, full-length (PCIe x16 slot is double-wide)
- Slot 2: PCIe 3.0 x8; full-height, full-length (not present if the slot 1 is PCIe x16)
- Slot 3: PCIe 3.0 x8 or ML2; full-height, half-length
- Slot 4: PCIe 3.0 x8; low profile (vertical slot on system planar)
- Slot 5: PCIe 3.0 x16; low profile (vertical slot on system planar)
- Slot 6: PCIe 3.0 x16 or PCIe 3.0 x8; full-height, full-length (PCIe x16 slot is double-wide)
- Slot 7: PCIe 3.0 x8; full-height, full-length (not present if the slot 6 is PCIe x16)
- Slot 8: PCIe 3.0 x8; full-height, half-length
- Slot 9: PCIe 3.0 x8 (dedicated for an internal RAID controller)

**Note:** Slots 5, 6, 7, and 8 require the second processor to be installed.

The locations of the PCIe slots are shown in the following figure.

Figure 7. Slot locations

Riser 1 supplies slots 1, 2, and 3, and Riser 2 supplies slots 6, 7, and 8. The slots that are available for use depend on the number of riser cards that are installed and whether the second processor is installed, as shown in the following table.

Table 17. Slots available for use

Riser Card 1	Riser Card 2	Slots available for use
<b>One processor</b>		
None	None	4, 9
PCIe x8	None	1, 2, 3, 4, 9
PCIe x16	None	1, 3, 4, 9
<b>Two processors</b>		
None	None	4, 5, 9
PCIe x8	None	1, 2, 3, 4, 5, 9
PCIe x8	PCIe x8	1, 2, 3, 4, 5, 6, 7, 8, 9

PCIe x16	PCIe x16	1, 3, 4, 5, 6, 8, 9

Standard models do not include any riser cards. The following table lists available PCIe riser card options.

Table 18. PCIe riser cards and miscellaneous options

<b>Serial port bracket</b>			
COM Port Bracket	00KA161	A5AN	1
<b>Thermal kit</b>			
System x3650 M5 PCIe Thermal Solution Kit	00MU908	ASQD	1

Riser option part numbers 00KA489 and 00KA498 can be installed in both riser slots 1 and 2; for CTO or special bid orders these option part numbers have different feature codes depending on the riser slot into which they are installed.

The x3650 M5 Thermal Kit, part number 00MU908, contains an air baffle. It is required when the Intel X540 ML2 Dual Port 10GbaseT Adapter for System x, part number 00D1994, is present in the configuration.

The COM Port Bracket, part number 00KA161, is used for mounting the external serial port on the rear of the x3650 M5. This option includes the bracket and the cable. The COM Port option is mounted in place of the PCIe slot 5, and the PCIe slot 5 cannot be used.

## Network adapters

The System x3650 M5 supports four integrated Gigabit Ethernet ports. Optionally, the x3650 M5 server supports ML2 adapters that are installed in the custom ML2 slot provided by the PCIe ML2 riser cards (part numbers 00KA504 and 00KA519). This slot supports adapters with either two 10 Gb ports or four Gigabit Ethernet ports and supports direct connectivity to the IMM2 service processor for out-of-band systems management.

The integrated network interface controller (NIC) has the following features:

- A Broadcom BCM5719 chip
- Four Gigabit Ethernet ports
- NIC Teaming (load balancing and failover)
- Ethernet features:
  - Compliant with 1 Gb Ethernet IEEE 802.3, 802.3u, and 802.3ab PHY specifications

- All GPUs installed in the server must be the same.
- The maximum memory that can be installed is 1 TB.
- Further restrictions may apply depending on the power supplies installed (see "Power supplies").

## Power supplies and cables

The x3650 M5 server supports up to two redundant power supplies. Standard models come with one power supply. The following table lists the power supplies.

Table 25. Power supplies

Description	Part number	Feature code	Maximum supported
System x 550W High Efficiency Platinum AC Power Supply	00FK930	A5ET	2
System x 750W High Efficiency Platinum AC Power Supply	00FK932	A5EU	2

System x 1500W High Efficiency Platinum AC Power Supply (200-240V)	00MU909	ASQE	2

General power supply rules are as follows:

- Minimum of 1 and maximum of 2 power supplies per system.
- If 2 are installed, power supplies must be identical.

**Important:** The Standalone Solution Configuration Tool (SSCT) and Lenovo Data Center Advisor and Configurator Tool (DCACT) power supply selection rules allow a subset of possible configurations due to power restrictions. Configurations that cannot be built in SSCT or DCACT due to power restrictions may still be supported. To verify support and ensure that the right power supply is chosen for optimal performance, you should always validate your server configuration using the latest version of the System x Power Configurator: <https://support.lenovo.com/documents/LNVO-PWRCONF>

A hot-swap power supply option ships standard with one 2.8m, 10A/100-250V, IEC 320-C13 to IEC 320-C14 rack power cable. Other line cords and rack cables can be ordered if needed (see the following table).

## Integrated virtualization

The server supports VMware ESXi installed on a USB memory key or one or two SD cards in the SD Media Adapter for System x. The USB memory key is installed in a USB socket inside the server. The SD Media Adapter is installed in a dedicated slot inside the server.

When only one SD card is installed in the SD Media Adapter, you can create up to 16 volumes, each of which is presented to UEFI as a bootable device. When two SD Media cards are inserted, volumes can be mirrored (RAID 1) across both cards, up to a total of eight mirrored volumes. The use of mirrored volumes improves system availability because the server remains operational, even if one SD card fails. The RAID functionality is handled internally by the SD Media Adapter.

The following table lists the virtualization option.

## Systems management

The System x3650 M5 supports the following systems management tools:

- Integrated Management Module 2.1
- Light path diagnostics
- Lenovo ToolsCenter
- Lenovo XClarity Administrator
- Lenovo XClarity Energy Manager

### Integrated Management Module 2.1

The server contains Integrated Management Module II (IMM2.1), which provides advanced service-processor control, monitoring, and an alerting function. If an environmental condition exceeds a threshold or if a system component fails, the IMM2 lights LEDs to help you diagnose the problem, records the error in the event log, and alerts you to the problem. Optionally, the IMM2 also provides a virtual presence capability for remote server management capabilities.

The IMM provides remote server management through industry-standard interfaces:

- Intelligent Platform Management Interface (IPMI) Version 2.0
- Simple Network Management Protocol (SNMP) Version 3
- Common Information Model (CIM)
- Web browser

The optional Integrated Management Module Advanced Upgrade is required for enabling remote presence and blue-screen capture features. The remote presence feature provides the following functions:

- Remotely viewing video with graphics resolutions up to 1600x1200 at 75 Hz with up to 23 bits per pixel colors, regardless of the system state
- Remotely accessing the server using the keyboard and mouse from a remote client
- Mapping the CD or DVD drive, diskette drive, and USB flash drive on a remote client, and mapping ISO and diskette image files as virtual drives that are available for use by the server
- Uploading a diskette image to the IMM memory and mapping it to the server as a virtual drive

The blue-screen capture feature captures the video display contents before the IMM restarts the server when the IMM detects an operating-system hang condition. A system administrator can use the blue-screen capture to assist in determining the cause of the hang condition.

The following table lists the remote management option.

### Light path diagnostics

All models include basic light path diagnostics, which include system LEDs on the front of the server (See Figure 2) and LEDs near the monitored components (for example, the DIMM error LED on the system board).

Server models with 8x 3.5-inch or 8x or 16x 2.5-inch front drive bays support a next-gen light path diagnostics LCD display panel (standard on 8x 3.5-inch models; available as an option for 8x or 16x 2.5-inch models). With LCD display, you have quick access to system status, firmware, network, and health information.

Server models with 8x or 16x 2.5-inch front drive bays that are upgradeable to 24x 2.5-inch front drive bays and models with 12x 3.5-inch front drive bays do not support an LCD display panel.

The following table shows the LCD display panel ordering information.

## Warranty services and upgrades

The System x3650 M5 has a three-year customer-replaceable unit (CRU) and onsite (for field-replaceable units [FRUs] only) limited warranty with standard call center support during normal business hours and 9x5 Next Business Day Parts Delivered.

Some countries might have different warranty terms and conditions than the standard warranty. This is due to local business practices or laws in the specific country. Local service teams can assist in explaining country-specific terms when needed. Examples of country-specific warranty terms are second or longer business day parts delivery or parts-only base warranty.

If warranty terms and conditions include onsite labor for repair or replacement of parts, Lenovo will dispatch a service technician to the customer site to perform the replacement. Onsite labor under base warranty is limited to labor for replacement of parts that have been determined to be field-replaceable units (FRUs). Parts that are determined to be customer-replaceable units (CRUs) do not include onsite labor under base warranty.

If warranty terms include parts-only base warranty, Lenovo is responsible for delivering only replacement parts that are under base warranty (including FRUs) that will be sent to a requested location for self-service. Parts-only service does not include a service technician being dispatched onsite. Parts must be changed at customer's own cost and labor and defective parts must be returned following the instructions supplied with the spares parts.

Also available are Lenovo Services warranty maintenance upgrades and post-warranty maintenance agreements, with a well-defined scope of services, including service hours, response time, term of service, and service agreement terms and conditions.

Lenovo warranty service upgrade offerings are country-specific. Not all warranty service upgrades are available in every country. For information about Lenovo warranty service upgrade offerings that are available in your country or area, refer to the following resources:

- Service part numbers in Data Center Solution Configurator (DCSC):  
<http://dcsc.lenovo.com/#!/services>
- Lenovo Services Availability Locator  
<https://lenovolocator.com/>

In general, the following Lenovo warranty service upgrades are available:

- Warranty and maintenance service upgrades:

  - 1-year or 2-year post-warranty extensions
  - Foundation Service: 9x5 service coverage with next business day onsite response
  - Essential Service: 24x7 service coverage with 4-hour onsite response or 24-hour committed repair (available only in select countries)
  - Advanced Service: 24x7 service coverage with 2-hour onsite response or 6-hour committed repair (available only in select countries)
- Premier Support  
Premier Support service offers direct access to Lenovo's most advanced technicians for faster troubleshooting with single point of contact for end-to-end problem resolution and collaborative third-party software support.
- YourDrive YourData  
Lenovo's YourDrive YourData service is a multi-drive retention offering that ensures your data is always under your control, regardless of the number of drives that are installed in your Lenovo server. In the unlikely event of a drive failure, you retain possession of your drive while Lenovo replaces the failed drive part. Your data stays safely on your premises, in your hands. The YourDrive YourData service can be purchased in convenient bundles with Foundation, Essential, or Advanced Service upgrades and extensions.
- Enterprise Server Software Support  
Lenovo Enterprise Server Software Support can help you troubleshoot your entire server software stack. Choose support for server operating systems from Microsoft, Red Hat, SUSE, and VMware; Microsoft server applications; or both operating systems and applications. Support staff can help answer troubleshooting and diagnostic questions, address product compatibility and interoperability issues, isolate causes of problems, report defects to software vendors, and more.
- Basic Hardware Installation Services  
Lenovo experts can seamlessly manage the physical installation of your server, storage, or networking hardware. Working at a time convenient for you (business hours or off shift), the technician will unpack and inspect the systems on your site, install options, mount in a rack cabinet, connect to power and network, check and update firmware to the latest levels, verify operation, and dispose of the packaging, allowing your team to focus on other priorities.
- Microcode Support  
Keeping microcode current helps prevent hardware failures and security exposure. There are two levels of service: analysis of the installed base and analysis and update where required. Offerings vary by country and can be bundled with other warranty upgrades and extensions.
